

# Creating a safe place to fail

Resilience and Meaningful  
Change: Rethinking How  
We Design Education

4-Dec-2025

## The problem

---

When educating or training, too often the focus is on results instead of performance.

When working with people, we don't control the results, we can only perform according to how we learned.

# Four types of transfer

---

Not everything is training, there are four types of information transfer we call training:

- Presentation
- Practice
- Education
- Training

# Story time

*Why experiential learning  
is important:*

In corporate learning

In public safety learning

In education

# Scenario-based learning

Scenario-based learning needs to:

- reflect the the job – data driven
- combine multiple knowledge and skill sets
- reflect tasks and reality
- require decision making
- include failure

# Designing them

---

Scenario-based learning needs to be designed and intentional. It must:

- be structured
- be documented
- be scripted
- include roleplayer cards
- provide realistic environments

## Why failure matters

Failure happens already; it is better to prepare participants to expect it.

- Failure is part of reality
- Change paradigm from “bad results = failure”
- Builds confidence
- Builds resiliency
- Creates a level of personal control

## What it is all about

It is all about helping people find solutions and peace!
